

Drift-fiant™

- Canopy Penetration
- Drift Reduction
- Deposition Aid

Deposition and Droplet Retention

Drift-fiant™ improves Deposition and Droplet Retention on the leaf increasing herbicide uptake and performance giving you better control.

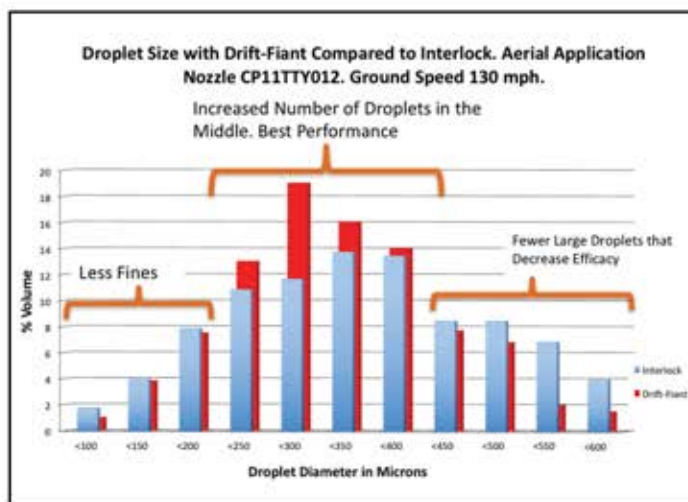

Drift Reduction

Drift-fiant™ reduces the number of driftable fines by increasing water elasticity and creating bigger droplets.

Drift-fiant™ does not increase the large bounce of droplets like many other drift control agent. Drift-fiant™ put an average of 10%-20% more active ingredients on the weeds.

- Drift-fiant™ is compatible with most tank mixes.
- Low Use Rates: 1-2 pints/100 gallons
- Aerial applications: 1 pint/100 gallons

Canopy Penetration

Drift-fiant™ reduces the number of driftable fines by increasing water elasticity therefore creating bigger droplets.
